

HomePlay 3 - Workshop

Task. #1

Ensure your '**Nexus Repository Manager**' Server is up and running;

- a) New command window (ensure has Administrator privileges).
- b) From the **<nexus>/bin** directory run the command:

nexus console

Task. #2

Import the '**teaching-academy-user-management**' project into eclipse.

Project is held in the **academy-user-maintenance-master.zip** downloadable from the '**Resources**' area.

Task. #3

Open your 'settings.xml' file and review the **<repositories>** element.
Ensure it has the a '**releases**' repository set up.

Task. #4

Modify the pom.xml file so the project will have a dependency on
'**academy-user-details**' module, version: **2.0.6-RELEASE**

Task. #5

In Eclipse perform a 'maven update', note change in the 'Maven Dependencies'.

Now perform a maven 'clean install'.

Check the output from the Console window in Eclipse, make a note of any interesting behaviour shown in the output.
